

## EngraveLab Laser

The complete software solution for the laser engraving shop.

### Auto Layout

The Auto Layout feature simply and easily creates single and multi-line engraving plates. Work directly on screen using our unique What You See Is What You Engrave (WYSIWYE) interface. Easily add graphics and logos to your jobs. Create a library of layout templates for future jobs.

### Badges

Use the Badges feature to create single or multiple plates per sheet. Text substitution and serialization have never been this easy. Create one template and let the Badges feature substitute the selected text.

### Serialization

The ability to numerically and alphabetically serialize each item or badge automatically. Parts marking has never been easier with our powerful serialization routine.

### Block Nesting

Optimize space and utilize material efficiently by nesting your work. The job is now more profitable! You can even handle those big production jobs as Nesting will create as many plates necessary to fulfill the order.

### Scan to Engrave

High quality color and B&W raster to vector tracing converts difficult artwork into easy to use vector designs. Includes unique editing tools that make image clean up simple and fast.

### Contour Cut

Automatically create a contour cut around raster and vector images. No need to spend the time and effort to vectorize (trace) raster images or hand draw contour lines.

### 65+ Import/Export filters

Includes Industry standard import/export plus the ability to import stroke width. A seamless CorelDRAW® interface so that you transfer files easily without file degradation.

### 1100 Fonts & 5000+ Clipart

Includes a large font and clipart library that has been meticulously designed with great accuracy so that they are engrave or cut ready. Windows TrueType fonts, Adobe fonts and Corel WFN fonts are also supported.

### 100+ Engraving Fonts

Improve output efficiency using our single and multi-line engraving fonts.

### Upgrade to Drive Spindle based Engraving Machines

Upgrade your EngraveLab Laser to Pro and drive your open architecture spindle based engraving machines. Run your entire engraving shop from one software solution!

### Signtopia e-Commerce Tools

FREE trial access to Signtopia.com, providing your shop with the latest e-Commerce tools. Use NetShop, e-Portfolios and e-Quotes and Proofs to promote, market, and sell your goods.

### Toll Free Tech Support\*

800 Technical Support available 9-5 EST  
(\*North America only)

EngraveLab Laser is a powerful Windows based graphics application that has all the tools to be your one stop engraving software solution. These tools are specific to the laser engraving industry, providing the power to be efficient and cost effective. If you are in need of high levels of production, EngraveLab Laser provides the right tools to achieve that goal.
